Survey Information

Site Name: High Crest Date: April 20, 2020 Biologist: Jeff Horn Survey Method: airboat

Water Quality

Alkalinity (mg/l) <small>[Range: 20-200 ml]</small>	Dissolved Oxygen (ppm) <small>[Desirable Range: 6-10 ppm]</small>	Secchi/Clarity (ft) <small>[Higher=Better]</small>	pH (SU) <small>[Range: 6.5-8.5 SU]</small>	Temp. (°F) <small>[Seasonal Range: 41-86°]</small>
80	13	10	8	50

Note: Typical ranges are provided unless otherwise noted. Normal readings may be within, above or below typical ranges. Fluctuations from normal readings may indicate a need for further analysis.

Comments

Observed trace amounts of Curly-Leaf pondweed occupying the areas of the far most northwest cove west of the launch, and in the northwest corner of the main body of the lake basin. Sparse amounts of Nitella scattered throughout. The lake looks good. There was no treatment conducted on this visit.

Plant Density Key
